

Product Datasheet

Film Reference **RSB35**

Film Classification A natural SWS shrink film/stretch banding film incorporating Post-Consumer Recyclate (PCR also described as PCW)

Film Type Mono

PCR Content >30%

Product Description Low temperature high performance natural stretch film, for use on twin reel fed lines.

Typical Uses The Banding of collated packs /boxes for food and non-food products mainly in the Pharmaceutical/ Cosmetic industries.

Key Features Good memory retention excellent sealing characteristics low temperature sealing

Thickness 40-50 micron

Film Widths 40mm up to 200mm

COF Film is medium Slip.

Characteristics Due to the fact that the film contains washed PCR the film properties will be more variable compared to that of a film made from 100% virgin materials. The PCR material will have a stronger odour and also more variability in the clarity. Whilst we will monitor properties through the normal checks within the production process some of the variables will be out of our control due to the nature of the recycled material.

PCR The majority of PCR is sourced from waste streams of major UK supermarkets.

Food Contact This film uses PCR which is **not** suitable for food contact.

Recyclability The polymers used are 100% PE which therefore means it can be recycled with carrier bags in larger stores
